EXECUTIVE SITUATION SUMMARY:

Automated change-intelligence detected 410 change polygons totaling 115,809,100 m² across the surveyed bounds; 13 critical and 84 high-priority sites are queued for ground verification. 5.3% of the area was under cloud, shadow or no data on either date: not assessed, mapped separately. Detector: Event detector · new water (MNDWI > 0), F1 77% on Copernicus EMS EMSR838 AOI05 DEL_MONIT04 (Sentinel-1, 2025-09-02). High-priority footprints are available as draft SACHET-compatible CAP records.

DATA LIMITATIONS:

- Image comparability 77/100 (fair); biggest factor: 77 days apart in the seasonal cycle.
- Change dated from 5 dated images (2025-06-18 to 2026-04-14).
- OpenStreetMap exposure and buffer checks are screening only, not legal boundaries; verify against revenue, FTL and Development Plan records before any notice.

RECOMMENDED IMMEDIATE DIRECTIVES:

1. Dispatch relief and rescue teams to Priority 1 flood polygons near hospitals and schools.
2. Confirm water extent on the ground; satellite water maps lag the river by up to a day.
3. Review the draft SACHET CAP alerts before authorising any public broadcast.
4. Re-run with the next clear Sentinel-2 or a Sentinel-1 radar pass to track the flood.
